

Après analyse des logs récupérés sur le poste j'ai pu écarter la cause de l'antivirus, celui-ci agit correctement sur le system sans poser le moindre problème.
Les plantages que j'ai repéré son souvent lié à la suite Adobe, je ne pense pas que le problème soi ici le logiciel mais plutôt l'utilisation de l'utilisateur.
Selon moi ces plantages son lié à une saturation de la mémoire RAM, l'utilisateur ne fait pas ou très peu attention à la gestion de la mémoire, de nombreuses applications sont ouverte en simultané notamment des logiciels Adobe qui sont pour la plupart gourmands en mémoire vive et utilisation processeur.
Le mac de l'utilisateur est un Imac fin 2015 avec 8Go de RAM.
De plus j'ai remarqué lors de mon intervention sur son poste qu'il travaillait sur une ancienne version de Mac os, une mise à jour vers Mac os x Cathelina pourrait potentiellement corriger son problème.
